FREE TRAINING GUIDE

How I Use AI to Clone YouTube Channels

$90,000+ in Under One Year

The exact 3-step AI system, prompts, and workflow to replicate proven YouTube channels using Claude AI and Gemini.

WHAT'S INSIDE:

→ Full forensic channel analysis prompt (Claude Chrome Extension)

→ Deep trend research prompt (Google Gemini)

→ AI title engineering prompt for 30 data-driven video ideas

→ Step-by-step workflow breakdown with real examples

BEFORE YOU START

Requirements

There's one essential tool you'll need to get set up before running through this system. Without this in place, you won't be able to execute Step 1 — so take a few minutes to get it sorted before you continue. The good news is that setup takes less than five minutes, and you only need to do it once.

Install Claude Chrome Extension & purchase the Pro plan

https://claude.com/claude-for-chrome

The Chrome Extension gives Claude direct access to YouTube channel pages inside your browser. You'll also need the Pro plan, which unlocks Opus 4.6 — the most capable model for handling this kind of deep analysis. Without Opus 4.6, the forensic analysis prompt in Step 1 will not perform at the level required to produce a reliable replication blueprint. This is not optional — it is the foundation the entire system is built on.

Once you have the extension installed and the Pro plan active, you are fully equipped to begin. The remaining tools used in this guide — Google Gemini with Deep Research Pro — are introduced at the appropriate step. There is nothing else to configure upfront. When you are ready, turn the page and begin Step 1.

© 2026 Grow Channels — All Rights Reserved

OVERVIEW

The 3-Step System

This workflow chains three AI tools together to take you from a blank slate to a fully mapped-out YouTube channel with 30 research-backed video titles ready to produce. Each stage feeds directly into the next — analysis informs research, and research drives the final title creation. There is no guesswork in this system. Every output at every stage is grounded in observable data and real-time market signals.

1

Forensic Channel Analysis

Tool: Claude AI · Chrome Extension

Deep-dive into a proven channel's complete video catalogue — examining titles, views, patterns, and thumbnails — to uncover exactly what's driving their results.

2

Deep Trend Research

Tool: Google Gemini · Deep Research Pro

Take that analysis and plug it into Gemini to surface trending topics in real time, validated against what's already been shown to perform.

3

Title Engineering

Tool: Claude AI · Opus 4.6

Merge the analysis data with the trend research to produce 30 video titles built on proven formulas and validated topics. No guessing involved.

Start to finish, this takes roughly 30–45 minutes and produces a content roadmap that would otherwise require weeks of manual research. Once your 30 titles are ready, you pass them to your production team and the machine runs itself.

© 2026 Grow Channels — All Rights Reserved

STEP 1

Forensic Channel Analysis

Claude AI · Chrome Extension · Opus 4.6

What This Step Does

This prompt transforms Claude into a channel reverse-engineering machine. It examines every video on a target channel, flags outliers and underperformers, decodes title patterns, studies thumbnail design, and delivers a complete blueprint you can use to replicate what works. The output is not a summary — it is a forensic report with surgical precision, backed entirely by real data pulled from the channel itself. Every pattern it surfaces, every recommendation it makes, traces back to a specific video, a specific view count, a specific observable signal.

How To Use It

1 Launch the Chrome Extension

Go to the YouTube channel you want to study. Ensure you're on their main page where videos are listed.

2 Choose Opus 4.6

Switch to Claude Opus 4.6 in the model selector — it's the most powerful option and handles this level of analysis best.

3 Enter the Prompt

Copy the complete prompt from the next few pages and drop it into Claude's Chrome Extension. Press send.

4 Wait for the Analysis

Claude will scan the channel's video library, crunch the data, and compile the full report. Give it a few minutes to finish.

5 Export as PDF

When the report is done, save the full output as a PDF. You'll use this file as the input for Step 2.

> 💡 **Key Insight**
>
> Everything here is grounded in real data — no assumptions, no guesswork. Every finding links back to actual videos on the channel.

© 2026 Grow Channels — All Rights Reserved

STEP 1 — FULL PROMPT

Channel Analysis Prompt

Copy this entire prompt into Claude's Chrome Extension

```
<ROLE>
You are a Senior YouTube Channel Forensic Analyst and Growth Strategist.
You reverse-engineer successful channels at a surgical level to produce
actionable replication blueprints.
</ROLE>

<CONTEXT>
I am currently on a YouTube channel page. You have access to this page
through the Chrome extension. Your job is to extract, analyze, and
synthesize everything visible on this channel into a thorough replication
blueprint I can use to scale my own channel in a similar or adjacent niche.
</CONTEXT>

<INPUTS>
- The YouTube channel page currently open in Chrome (videos tab, about
 section, homepage, etc.)
- You will need to navigate the channel's Videos tab, Shorts tab (if
 applicable), About section, and homepage to collect complete data.
- Scrape as many videos as possible — titles, view counts, upload dates,
 and any visible metadata.
</INPUTS>

<NON_NEGOTIABLE_RULES>
1) Use ONLY what is visible on this channel. No outside best practices,
 no generic YouTube advice, no assumptions about revenue or subscriber
 quality.
2) Do not ask me clarifying questions. If info is missing or unclear,
 make ONE reasonable assumption and state it explicitly.
3) Every claim must reference specific videos, titles, or observable data
 from this channel. No unanchored opinions.
4) If you cannot access something, label it: [NOT ACCESSIBLE] and move on.
5) Treat every video as individual forensic evidence. Do not lump videos
 together without analyzing them individually first.
6) Confidence-tier every insight:
 [HIGH] = 5+ supporting examples
 [MEDIUM] = 3–4
 [LOW] = 1–2
</NON_NEGOTIABLE_RULES>

<DEFINITIONS>
- Outlier = Any video performing at 3x or more above the channel's
 median view count.
- Underperformer= Any video performing at 50% or below the channel's
 median view count.
- Title DNA = The recurring structural patterns, word choices, emotional
 triggers, and formatting conventions found in the
 highest-performing titles.
- Content Pillar= A distinct recurring topic or theme the channel returns
 to repeatedly.
- Upload Pattern= The observable cadence, timing, and frequency of uploads.
</DEFINITIONS>
```

© 2026 Grow Channels — All Rights Reserved

STEP 1 — FULL PROMPT (CONT.)

<PROCESS>

Phase 1 — CHANNEL OVERVIEW SNAPSHOT
Step 1) Scrape and record: Channel name, subscriber count, total video count, channel creation date (or earliest visible upload), niche/category, and channel description.
Step 2) Document the visual branding: Profile picture style, banner design, channel trailer presence, and any visible links or CTAs.

Phase 2 — FULL VIDEO INVENTORY AND PERFORMANCE MAPPING
Step 3) Scrape every accessible video: Title, view count, upload date. Compile a master list sorted by view count (highest to lowest).
Step 4) Calculate: Median views, mean views, and establish the outlier threshold (3x median).
Step 5) Produce:
- An outlier table (all videos at or above 3x median)
- An underperformer table (all videos at or below 50% median)

Phase 3 — TITLE DNA EXTRACTION
Step 6) Analyze ALL outlier titles individually. For each, record:
- Exact word count and character count
- Emotional trigger(s) used (curiosity, fear, greed, outrage, aspiration, etc.)
- Structural format (question, list, statement, "How X did Y", etc.)
- Power words or phrases
- Specificity devices (numbers, names, dollar amounts, timeframes)
- Capitalisation and punctuation patterns
Step 7) Cross-reference: Which patterns surface in outliers but NOT in underperformers? These are the differentiators.
Step 8) Assemble a Title DNA Profile: The 5–10 most statistically significant patterns with examples and frequency counts.

Phase 4 — CONTENT PILLAR AND TOPIC ANALYSIS
Step 9) Sort every video into topic clusters. Name each cluster.
Step 10) For each cluster, calculate: Number of videos, average views, outlier count, underperformer count.
Step 11) Rank clusters by performance. Identify: The #1 best-performing pillar, the most consistent pillar, and any pillars that should be retired.
Step 12) Surface topic gaps: Areas the channel hasn't covered that their audience likely wants.

Phase 5 — UPLOAD STRATEGY AND TIMING ANALYSIS
Step 13) Map upload frequency over time (monthly or quarterly buckets).
Step 14) Flag any visible patterns: Day of week preferences, seasonal spikes, posting cadence shifts and how they correlated with view performance.
Step 15) Pinpoint the channel's growth inflection points: When did views noticeably jump? What changed around that time?

© 2026 Grow Channels — All Rights Reserved

STEP 1 — FULL PROMPT (CONT.)

Phase 6 — THUMBNAIL PATTERN ANALYSIS
Step 16) Analyse the thumbnails of the top 15 outlier videos. For each, document:
- Text on thumbnail
- Number of faces/people visible
- Background style
- Dominant colours
- Visual hierarchy and focal point
- Emotional expression on any faces
Step 17) Compare outlier thumbnails against underperformer thumbnails. Identify the visual differentiators.
Step 18) Construct a Thumbnail Replication Formula capturing the most common elements across outliers.

Phase 7 — COMPETITIVE POSITIONING AND REPLICATION BLUEPRINT
Step 19) Distil the channel's core value proposition into one sentence.
Step 20) Identify what makes this channel defensible vs. easily replicable.
Step 21) Deliver a full Replication Blueprint containing:
- Recommended content pillars (ranked by priority)
- Title templates (10 fill-in-the-blank formulas from Title DNA)
- Thumbnail checklist
- Recommended upload cadence
- First 30 videos plan (topics + working titles)
- Risks and pitfalls to avoid

</PROCESS>

<OUTPUT_FORMAT_STRICT>
Return with these exact sections and headings:

A) Channel Snapshot
B) Performance Overview
C) Outlier Table
D) Underperformer Table
E) Title DNA Profile
F) Content Pillar Breakdown
G) Topic Gap Opportunities
H) Upload Strategy Insights
I) Thumbnail Replication Formula
J) Replication Blueprint
- Priority content pillars
- 10 title templates (fill-in-the-blank)
- Thumbnail checklist
- Upload cadence recommendation
- First 30 videos plan (topic + working title for each)
- Pitfalls to avoid
K) Confidence Summary

</OUTPUT_FORMAT_STRICT>

© 2026 Grow Channels — All Rights Reserved

STEP 1 — FULL PROMPT (CONT.)

```
<FINAL_REMINDER>
Stay forensic. Every insight must trace back to specific observable data
from this channel. Zero generic YouTube advice. If you catch yourself
writing something that could apply to "any channel," delete it and replace
it with something specific to THIS channel's data.
</FINAL_REMINDER>
```

⚠️ Important Reminder

Do not modify or abbreviate this prompt. Paste it in its entirety into the Claude Chrome Extension while you are on the target YouTube channel's video page. Partial prompts will produce partial results — the system is designed to work as a complete unit.

Once Claude completes its analysis, you will receive a detailed multi-section report. The next page walks you through exactly what each section contains and why it matters. After reviewing the output overview, export the full report as a PDF — you will need it for Step 2.

© 2026 Grow Channels — All Rights Reserved

STEP 1 — OUTPUT

What You'll Get Back

Claude delivers a detailed report organised into 11 sections. Here's a quick look at what each one covers and why it matters. Each section of the output is designed to feed directly into the next phase of the system — nothing is decorative. Every data point you receive will be used in either Step 2 or Step 3.

A	**Channel Snapshot**	Subscriber count, video count, niche, creation date, branding breakdown
B	**Performance Overview**	Median/mean views, outlier thresholds, performance distribution
C	**Outlier Table**	Every high-performing video ranked with view counts and outlier multiples
D	**Underperformer Table**	Videos that flopped — so you know exactly what to avoid
E	**Title DNA Profile**	The 5–10 patterns that statistically drive clicks in this niche
F	**Content Pillar Breakdown**	Topic clusters graded A through F by performance
G	**Topic Gap Opportunities**	Untapped topics the channel hasn't covered yet
H	**Upload Strategy**	Frequency patterns, timing insights, growth inflection points
I	**Thumbnail Formula**	Visual patterns from outlier thumbnails vs underperformers
J	**Replication Blueprint**	Title templates, thumbnail checklist, first 30 videos plan
K	**Confidence Summary**	Every insight tagged HIGH / MEDIUM / LOW confidence

📄 Next Action

Download this full analysis as a PDF — you'll need it for Step 2. This file is the primary input for the Gemini trend research prompt. Without it, Step 2 cannot be executed properly.

© 2026 Grow Channels — All Rights Reserved

STEP 2

Deep Trend Research

Google Gemini · Deep Research Pro

What This Step Does

This prompt hands your channel analysis to Gemini and puts it to work scanning the web for what's trending in your niche right now. It pulls data from Google Trends, YouTube search signals, Reddit, Twitter, news outlets, and competing channels — then filters for topics that have real momentum and aren't yet saturated. The output is not a generic trend report. It is a niche-specific intelligence brief, grounded in the exact content pillars and audience psychology you identified in Step 1. Every topic it surfaces has already been validated against what you know works.

How To Use It

1 Go to Google Gemini

Head to gemini.google.com. You'll need access to Deep Research Pro for this step.

2 Upload Your Analysis PDF

Attach the PDF report you exported from Step 1 as a file.

3 Enter the Prompt

Grab the full trend research prompt from the following pages and paste it into the chat.

4 Use Deep Research Pro

This is key — Deep Research Pro enables Gemini to conduct live web research across dozens of sources at once.

5 Send & Be Patient

Gemini will crawl Google Trends, YouTube autocomplete, Reddit threads, news sites, and competitor channels. Expect it to take a few minutes.

6 Save as PDF

When it's finished, export the complete research report as a PDF — you'll need it for the final step.

© 2026 Grow Channels — All Rights Reserved

STEP 2 — FULL PROMPT

Trend Research Prompt

Copy this entire prompt into Google Gemini with Deep Research Pro

```
<ROLE>
You are a Niche Trend Intelligence Analyst and Content Strategist. You
specialise in surfacing emerging, trending, and underserved topics within
specific YouTube niches by cross-referencing channel performance data with
real-time market signals.
</ROLE>

<CONTEXT>
I have just completed a full forensic analysis of a successful YouTube
channel in my target niche. That complete analysis is pasted below. Your
job is to use it as your foundation — understanding exactly what works in
this niche, what the audience responds to, and which content pillars drive
performance — then conduct deep web research to uncover current and
emerging trending topics I should be producing content around RIGHT NOW.

This is not about generic trend reports. You are hunting for specific video
topics that sit at the intersection of:
 1) Proven demand (validated by the channel analysis data)
 2) Current momentum (trending now or gaining traction)
 3) Low saturation (not yet overdone on YouTube)
</CONTEXT>

<INPUTS>
- The full channel forensic analysis is pasted below.
- You have access to deep research capabilities — USE THEM EXTENSIVELY.

<CHANNEL_ANALYSIS>
{{PASTE YOUR FULL CHANNEL ANALYSIS HERE}}
</CHANNEL_ANALYSIS>
</INPUTS>

<NON_NEGOTIABLE_RULES>
1) You MUST conduct deep web research. Do not rely on training data alone.
2) Every trending topic must connect back to a proven content pillar or
 Title DNA pattern from the channel analysis.
3) For each topic, provide the SOURCE of the trend signal.
4) Do not suggest topics the analysed channel has already covered
 thoroughly unless there is a NEW angle.
5) Confidence-tier every topic:
 [HOT] = Multiple strong signals in last 7–14 days
 [RISING] = Building momentum over last 30–60 days
 [EMERGING] = Early signals that could break out in 1–3 months
6) Do not give generic advice. Every output must be specific enough that
 I could write a script tomorrow.
</NON_NEGOTIABLE_RULES>
```

© 2026 Grow Channels — All Rights Reserved

STEP 2 — FULL PROMPT (CONT.)

<RESEARCH_PROCESS>

Phase 1 — NICHE LANDSCAPE MAPPING
Step 1) Extract the niche, top 3 content pillars, Title DNA patterns, and the audience's core emotional drivers.
Step 2) Identify 5–8 primary search vectors for this niche.

Phase 2 — REAL-TIME TREND HUNTING
Step 3) Search Google Trends for rising and breakout queries, seasonal patterns for the next 90 days.
Step 4) Search YouTube directly: sort by upload date, find videos posted in the last 30 days that are overperforming.
Step 5) Search Reddit, X/Twitter, niche forums for recurring questions, debates, and viral discussions happening RIGHT NOW.
Step 6) Search major news outlets and industry publications for recent developments.
Step 7) Check YouTube search autocomplete — these are real-time demand signals.

Phase 3 — COMPETITOR GAP ANALYSIS
Step 8) Scan the top 5–10 competitor channels. Identify topics they're covering, any recent explosions, and gaps nobody is filling.
Step 9) Cross-reference competitor topics with the analysed channel's proven pillars.

Phase 4 — TOPIC SYNTHESIS AND SCORING
Step 10) Compile all trend signals. Remove duplicates.
Step 11) Score each topic: Pillar Alignment, Trend Strength, Saturation Level, Title DNA Match, Urgency.
Step 12) Rank by overall opportunity score.

Phase 5 — READY-TO-EXECUTE OUTPUT
Step 13) For each of the top 25 topics, produce a complete content brief: Topic, Angle/Hook, Why it's trending, 3 Title Options, Script Direction, Urgency Window.

</RESEARCH_PROCESS>

<OUTPUT_FORMAT_STRICT>
Return with these exact sections and headings:

A) Niche Intelligence Summary
B) Research Vectors Used
C) Google Trends Signals
D) YouTube Real-Time Demand Signals
E) Community and Social Signals
F) News and Industry Developments
G) Competitor Gap Analysis
H) Master Trend Scoreboard
(Table: Topic | Pillar Alignment | Trend Tier | Saturation | Title DNA Match | Urgency | Overall Rank)
I) Top 25 Ready-to-Execute Content Briefs
J) 90-Day Content Calendar Recommendation
K) Confidence and Source Log

</OUTPUT_FORMAT_STRICT>

© 2026 Grow Channels — All Rights Reserved

STEP 2 — FULL PROMPT (CONT.)

```
<FINAL_REMINDER>
You are not a generic trend reporter. You are a strategist who understands
THIS specific niche deeply because you have the forensic channel analysis
as your foundation. Every topic you surface must be:

 - Actionable
 - Specific
 - Backed by a real trend signal
 - Compatible with the proven content formulas from the analysis

If a topic is trending but doesn't fit this niche's audience or proven
pillars, discard it. Quality and specificity over volume — but I still
need 25 strong topics minimum.
</FINAL_REMINDER>
```

📄 Next Action

When Gemini has completed its deep research pass, export the full output as a PDF. This document — combined with your Step 1 analysis PDF — is what you will bring into Step 3. Both files are required inputs for the final title engineering prompt.

The trend research report Gemini generates will typically be substantial — expect 15 to 30 pages of dense analysis. Do not skim it. The quality of your 30 final titles in Step 3 is directly proportional to the richness of the data you bring into the last prompt. Save everything.

© 2026 Grow Channels — All Rights Reserved

STEP 3

AI Title Engineering

Claude AI · Opus 4.6

What This Step Does

This is where the two halves come together. You give Claude the channel analysis and the trend research, and it builds 30 video titles by matching proven title formulas against validated, trending topics. It's systematic engineering, not creative brainstorming. There is no improvising, no gut-feel guessing, and no generic clickbait. Every title that comes out of this step is traceable back to a specific performance-proven pattern and a specific real-time trend signal. The result is a queue of 30 data-engineered titles that your production team can execute immediately.

How To Use It

1. **Open Claude AI (claude.ai)**

   Navigate to Claude and confirm you have Opus 4.6 selected.

2. **Add the Analysis**

   Paste your complete channel analysis into the prompt at the designated spot.

3. **Add the Research**

   Paste the Gemini trend research report into the second designated spot.

4. **Enter the Prompt**

   The engineering prompt wraps around both documents. Drop in the full prompt with both datasets embedded.

5. **Review the Output**

   Claude generates 30 titles, each tagged with the source topic, title pattern used, emotional hook, content pillar, and urgency level.

What You Get

- 30 video titles ranked by urgency (HOT topics first, EMERGING last)
- Every title traced to a specific Title DNA formula and trending topic
- Built-in pattern diversity — no single formula appears more than 3 times
- A prioritised queue of the 10 most time-sensitive titles to produce first
- Complete source traceability and confidence scoring for each title

© 2026 Grow Channels — All Rights Reserved

STEP 3 — FULL PROMPT

Title Engineering Prompt

Copy this entire prompt into Claude AI (Opus 4.6)

```
<ROLE>
You are a YouTube Title Engineer specialising in data-driven title
creation. You do not guess. You do not improvise. You reverse-engineer
proven title formulas from performance data and apply them to validated
trending topics to produce titles engineered for maximum CTR.
</ROLE>

<CONTEXT>
I have two documents:
 1) A full forensic channel analysis — containing outlier identification,
 Title DNA patterns, content pillar rankings, thumbnail formulas, and
 a replication blueprint.
 2) A deep trend research report — containing real-time trending topics,
 Google Trends signals, competitor gaps, community demand signals, and
 25 ready-to-execute content briefs.

Your job is to merge these two datasets — the PROVEN FORMULAS with the
VALIDATED DEMAND — and deliver 30 titles engineered to perform.

You are not brainstorming. You are pattern-matching and
precision-engineering.
</CONTEXT>

<INPUTS>
<CHANNEL_ANALYSIS>
{{PASTE YOUR FULL CHANNEL ANALYSIS HERE}}
</CHANNEL_ANALYSIS>

<TREND_RESEARCH>
{{PASTE YOUR FULL GEMINI TREND RESEARCH HERE}}
</TREND_RESEARCH>
</INPUTS>

<NON_NEGOTIABLE_RULES>
1) Every title MUST apply a specific Title DNA pattern. No freelancing.
2) Every title MUST be built around a HOT, RISING, or EMERGING topic.
3) Do NOT merge two unrelated trends. One core topic per title.
4) Zero fabrication — no facts or entities not in either document.
5) Titles must reflect the analysed channel's style precisely.
6) No pattern reused more than 3 times across the 30 titles.
7) Prioritise HOT first, then RISING, then EMERGING.
8) No generic clickbait. Specific enough to know the video's topic.
</NON_NEGOTIABLE_RULES>
```

© 2026 Grow Channels — All Rights Reserved

STEP 3 — FULL PROMPT (CONT.)

<PROCESS>

Phase 1 — FORMULA EXTRACTION
Step 1) Extract every Title DNA pattern. For each: pattern name, 2–3 outlier examples, emotional trigger, word count range, signature words/phrases.
Step 2) Extract top-performing content pillars by grade.
Step 3) Extract word banks, power words, recurring language.

Phase 2 — TOPIC SELECTION
Step 4) Pull all topics with: Pillar Alignment Yes/Partial, Title DNA Match Yes, Saturation Low/Medium, Trend Tier HOT/RISING/EMERGING.
Step 5) Rank: HOT + Low Saturation first, then RISING + Low, then EMERGING + Low, then Medium Saturation.
Step 6) Select the top 30. Expand to Partial alignment if needed.

Phase 3 — TITLE ENGINEERING
Step 7) For each topic, engineer ONE title by:
a) Selecting best-fit Title DNA pattern
b) Inserting the topic's core hook/angle
c) Applying the channel's signature words and formatting
d) Checking word count against outlier range
e) Verifying emotional trigger alignment
f) Confirming zero fabricated facts
Step 8) Review for: pattern diversity, topic diversity, urgency ordering, style consistency.
Step 9) Rebuild any title that fails a check.

</PROCESS>

<OUTPUT_FORMAT_STRICT>
Return with these exact sections and headings:

A) Title DNA Patterns Extracted
B) Word Bank and Style Rules
C) Topic Selection Log
D) The 30 Titles
(Each with: Title, Topic, Trend Tier, Urgency Window, Pattern Used, Outlier Reference, Emotional Trigger, Content Pillar, Word Count)
E) Pattern Distribution Check
F) Pillar Distribution Check
G) Quick-Start Priority Queue (top 10 to produce FIRST)

</OUTPUT_FORMAT_STRICT>

<FINAL_REMINDER>
You are an engineer, not a creative. Every title must trace back to BOTH a specific Title DNA pattern AND a specific trending topic. Zero generic titles. Zero invented angles. Zero pattern-breaking.
</FINAL_REMINDER>

© 2026 Grow Channels — All Rights Reserved

EXECUTION

From Titles to Revenue

With your 30 research-backed titles in hand, the rest of the process runs on autopilot. Here's how the production pipeline works. This is where the system graduates from AI research into real revenue — a repeatable, delegatable machine that compounds over time as you publish consistently and expand into additional channels.

The Production Pipeline

1	**Load Titles Into Trello** Move all 30 titles into your project board. Each card should include the title, a brief topic summary, and its priority ranking.
2	**Delegate to Your Team** Assign each video to a script writer, voice artist, editor, and thumbnail designer. The title and brief give everyone the context they need — no back-and-forth required.
3	**$75 Per Video Production** Source your production crew from Upwork.com. At roughly $75 per video, that covers scripting, voiceover, editing, and thumbnail design.
4	**Review & Publish** Give the finished video a quick quality check, publish it to YouTube with the optimised title, and let the algorithm take over.
5	**Rinse & Scale** Repeat this workflow every month. Each cycle gives you another 30 data-driven videos. Expand to additional channels in different niches for compounding growth.

THE MATH

It only takes a single breakout video to transform your channel.

One video → 1.5M views → $19,000 in revenue
